

The Knowledge Bank at The Ohio State University
Ohio State Engineer

Title: Back Matter

Issue Date: Nov-1931

Publisher: Ohio State University, College of Engineering

Citation: Ohio State Engineer, vol. 15, no. 2 (November, 1931).

URI: <http://hdl.handle.net/1811/34860>

Appears in Collections: [Ohio State Engineer: Volume 15, no. 2 \(November, 1931\)](#)

**Dynamite clears the way for modern
engineering wonders!**

The river front area of the Repauno dynamite plant near Gibbstown, New Jersey, where the du Pont Company first began manufacturing high explosives

**...Can
129 years' experience
help YOU?**

IN 1802, E. I. du Pont de Nemours, a young French chemist in America, built and began to operate a small powder mill on the banks of the Brandywine River.

Today—after 129 years—the trade-mark of the du Pont Company is well known throughout the industrial world. Du Pont Explosives have played a major part in building the nation's railroads, highways, aqueducts, reservoirs and subways; in clearing millions of acres of land, in mining enormous quantities of coal and other minerals, and in making possible many great engineering enterprises.

Du Pont has never been content merely to manufacture explosives. Its highly trained technicians have

spent years in chemical research . . . matching ingredient against ingredient . . . to develop new improvements or to make new explosives that will do a given job better. It is significant that a vast majority of all valuable New explosives come from the du Pont plants.

The information that du Pont has gathered in more than a century and a quarter is available to you. As an engineer of today—and tomorrow—you can't afford not to know all there is to know about DYNAMITE.

Write to the du Pont Company for *The Blasters' Handbook*—which tells you how to use explosives. Your free copy is waiting for you.

**ACCURATELY CUT
GEARS ~**

At Low Cost

THE rapid increase in the use of geared power transmission is greatly increasing the demand for low-cost, smooth running gears.

Brown & Sharpe Automatic Gear Cutting and Gear Hobbing Machines are meeting this demand with a remarkable degree of satisfaction. Spur and spiral gears of a wide range of diameter and pitch are being accurately produced, for use in all classes of industry.

The No. 139 Catalog lists this entire line of machines or complete specifications will be sent on request.

POWER PLANTS AFLOAT

ELECTRICITY, having revolutionized industrial methods, is well on its way to a conquest of the seas. Already, more than seventy ships are propelled by electric energy — liners, merchantmen, tankers, tugs, and every other type of seagoing craft.

Owners and masters alike praise the steady, dependable power — the speed without vibration — the economy of operation — the convenience of electric auxiliaries. Travelers have found new delight in the extraordinary comfort of electric propulsion and in the luxury of electric appliances.

The all-electric ship — a complete mobile power plant and system of distribution — is largely the achievement of college-trained men who have supplemented technical theory with practical experience in the General Electric Company.

Many of these engineers are now maintaining the prestige of General Electric not only in marine electrification but in every other department of design and application. Others, newly graduated, are gaining, in the Company's Test Department, a training which will enable them to join the ranks of electrical leadership on land and sea.
